

Minervarya Pentali

August 4, 2021

In news- A team of Delhi University (DU) researchers has discovered a new frog species and has named it after **former DU Vice-Chancellor and plant geneticist Deepak Pental**.

More information-

- The new frog species, Minervarya Pentali, was **discovered from the Western Ghats biodiversity hotspot** at multiple localities in Kerala and Tamil Nadu.
- This new species is **endemic to the southern Western Ghats**.
- This species is **also among the smallest known Minervarya frogs**.
- It belongs to the **family Dicroglossidae**.
- The new species was identified on the basis of multiple criteria including “external morphology, DNA and calling pattern.”
- The study was funded by DU, Department of Science and Technology (DoST), CSIR, Critical Ecosystem partnership Fund from the US, and Global Wildlife Conservation in the US.

Minervarya sahyadris is a species of frog that is **also endemic to Western Ghats** of India. Its IUCN status is **Endangered**.
